(54) Title: METHOD AND SYSTEM FOR IDENTIFYING THE IDENTITY OF A USER

(57) Abstract: The present invention describes a method and system for verifying the identity of a user of a first terminal in a communication system comprising at least a communication network (NET), a first terminal (DTE) associated with the communication network (NET) and a service provider (SP) associated with the communication network (NET). In the method, a first logical channel is set up via the communication network between the first terminal (DTE) and the service provider (SP). The user of the first terminal is identified after the first logical channel set up via a second logical channel other than the established first logical channel between the service provider and the first terminal prior to providing any services to the caller.
